Subject: Our Satisfaction with BWE Ltd and their Conform™ Extrusion Technology.

Dear Colleagues,

Since the commissioning of the Conform™ S400 TGR one and half year passed. We want to share our impressions of work on the equipment, and, in general, our joint work.

We are very satisfied with the Conform line and our decision to work with BWE. All that your company promised is fulfilled. We work in the recommended mode and we obtain the necessary performance. Spare set of interchangeable tools provided work during the year, as we planned and more. The amount of waste is less than we expected. This is a definite bonus.

We are completely satisfied with the product quality. Your technology provides excellent accuracy and repeatability sizes, fairly simple design and manufacture of dies with desired profile, good mechanical properties and stable quality of the surface of products. Furthermore, the technology and equipment allow convenient, timely and accurately control the process. We have the ability to quickly react to unexpected requests from our customers, because we can change immediately sizes of the product. It's important.

We are very grateful BWE professionals who participated in commissioning and at the same time were doing the training of our staff. It was a very important and successful period. As a result, we have no problem starting independent work, avoiding many of the pitfalls and difficulties. Your technical support and service department are working fine. These professionals respond quickly to our questions and always give an exhaustive answer and send the necessary information.

We expect to continue our relationships to mutual satisfaction.

Best regards,

Yuri Donets

CEO
